

Exercise 4

05.

```
In [2]: # Define system prompt (initial behavior)
system_prompt = {"role": "system", "content": "You are a helpful assistant"}

# Define user prompt (specific query)
user_prompt = {"role": "user", "content": "Explain how black holes are formed"}

# Send prompt to API
response = openai.ChatCompletion.create(
    model="gpt-3.5-turbo",
    messages=[system_prompt, user_prompt]
)
print(response['choices'][0]['message']['content'])
```

Black holes are formed when a massive star runs out of fuel and collapses in on itself during a supernova explosion. As the star collapses, the outer layers are blasted into space while the core collapses under its own gravity. If the core has a mass greater than about three times that of the Sun, it will collapse into a black hole.

The core of the star becomes so dense that its gravity becomes incredibly strong, causing it to collapse to a point of infinite density called a singularity. This singularity is surrounded by an event horizon, which is the point of no return for anything that crosses it. Once an object or light crosses the event horizon, it can never escape the gravitational pull of the black hole.

Black holes come in different sizes, with stellar-mass black holes being formed from the collapse of massive stars, and supermassive black holes found at the centers of galaxies, with masses millions or even billions of times that of the Sun.

07.

```
In [4]: # Define system prompt (initial behavior)
system_prompt = {"role": "system", "content": "You are an expert event planner for university students, including team-building activities."}

# Define user prompt (specific query)
user_prompt = {"role": "user", "content": "Can you give me a step-by-step plan for a 2-day nature camping batch of 20 students?"}

# Send prompt to API
response = openai.ChatCompletion.create(
    model="gpt-3.5-turbo",
    messages=[system_prompt, user_prompt]
)
print(response['choices'][0]['message']['content'])
```

Of course! Here is a step-by-step plan for a 2-day nature camping batch of 20 students, including team-building activities:

Day 1:

1. Pre-Event Planning:

- Select a suitable camping location with enough space for tents, campfires, and activities.
- Arrange transportation for the students to the camping site.
- Confirm necessary permits and permissions for camping.

2. Arrival and Setup:

- Welcome the students upon arrival and assign them to their designated camping spots.
- Provide a brief orientation on camp rules, safety guidelines, and the schedule of activities.

3. Team-Building Activities:

- Icebreaker games to help students get acquainted with each other.
- Team challenges such as relay races, scavenger hunts, or trust-building exercises.
- Group hiking or nature exploration to encourage teamwork and communication.

4. Evening Entertainment:

- Campfire with storytelling, music, and s'mores.
- Stargazing session led by a guide.
- Optional night hike for students interested in exploring nature after dark.

Day 2:

5. Morning Energizer:

- Start the day with a group yoga session or nature walk.
- Provide a hearty breakfast to fuel up for the day's activities.

6. Team-Building Workshops:

- Facilitate workshops on effective communication, problem-solving, and leadership skills.
- Engage students in team-building exercises that require collaboration and strategic thinking.

7. Adventure Activities:

- Offer outdoor activities such as zip-lining, rock climbing, or canoeing to challenge students and promote teamwork.
- Allow free time for students to explore the natural surroundings or engage in recreational activities.

8. Closing Ceremony:

- Gather the students for a closing ceremony to reflect on their experiences and accomplishments during the outing.
- Present awards or certificates to participants for their achievements.
- Provide a platform for students to share their feedback and suggestions for future outings.

9. Departure:

- Organize transportation for the students to return to their university campus or designated drop-off points.
- Thank the students for their participation and bid them farewell.

By following this step-by-step plan, you can create a memorable and impactful nature camping batch outing for university students, fostering teamwork, camaraderance, and outdoor experiences.

09.

```
In [5]: # Define system prompt (initial behavior)
system_prompt = {"role": "system", "content": "You are an expert Web Design

# Define user prompt (specific query)
user_prompt = {"role": "user", "content": "Give me 3 engaging content ideas

# Send prompt to API
response = openai.ChatCompletion.create(
    model="gpt-3.5-turbo",
    messages=[system_prompt, user_prompt]
)
print(response['choices'][0]['message']['content'])
```

Content Ideas:

1. "Day in the Life" Series: Share stories and experiences of IT students' typical day, highlighting the challenges, successes, and fun moments.
2. Tech Tip Tuesdays: Weekly posts featuring quick and practical tips for IT students, such as productivity tools, study resources, or coding shortcuts.
3. Student Spotlights: Showcase interviews or profiles of outstanding IT students, sharing their journeys, projects, and advice for fellow students.

UI Layout:

For the blog website focused on IT student life, I would suggest a simple and clean layout that prioritizes easy navigation and engaging content. Here is a suggested layout:

1. Header:

- Include the website name/logo on the top left corner.
- Navigation menu with categories like "Home," "About," "Blog," "Contact," etc.

2. Hero Section:

- Eye-catching image related to IT student life.
- Welcome message or brief introduction to the blog's purpose.

3. Blog Posts:

- Display latest blog posts with featured images and catchy headlines.
- Include social sharing buttons for easy sharing on Facebook and other platforms.

4. Sidebar:

- Include a search bar for easy navigation.
- Links to popular or recent blog posts.
- Newsletter sign-up form for users to subscribe.

5. Footer:

- Contact information and social media icons.
- Copyright information.
- Links to privacy policy and terms of service.

Overall, the layout should be visually appealing, user-friendly, and optimized for mobile devices for a seamless user experience.
